## ASC-ACTIVITIES

This week at OSHC, we launched into an exciting space adventure with our rocket ship theme! The children have been absolutely captivated by all things cosmic, and their enthusiasm truly made this week out of this world.

Our favorite activity was definitely creating  paper rocket ship crafts. The children rolled dark blue paper into tubes, colored their own unique rocket designs, and then attached them with yarn to make movable spacecraft. It was wonderful to see their creativity lift off!

These projects helped develop fine motor skills through rolling, coloring, and tying, while also encouraging problem-solving as children figured out how to balance their rockets. We also noticed great teamwork when children helped each other with the trickier steps of construction.

The room was filled with excited exclamations like, "My rocket has the most powerful engine - it's going to Mars!" and "Look, I can make my rocket fly up and down!" One particularly thoughtful child shared, "I put windows on my rocket so the astronauts can see the stars."

It's been incredible to watch the children's imaginations soar as they learned about space exploration. Their rockets are now proudly displayed in our classroom, each one representing a child's unique vision of space travel.

✔ Book in or cancel your booking via Fully Booked through your parent portal before the day your children attend.

# ASC-CLUB ACTIVITIES

**Yoga Club** - In Yoga Club, children enjoyed calming sessions filled with stretches, poses, and breathing exercises that promoted relaxation and focus. Through fun, child-friendly routines, they learned balance, body awareness, and mindfulness. Each session encouraged a sense of calm and confidence, helping children build both physical flexibility and emotional wellbeing

**Soccer** - Children enjoyed an active and skill-focused soccer session filled with exciting drills and small-sided games. They worked on mastering techniques like dribbling, passing, and shooting, while building confidence, teamwork, and overall physical coordination in a supportive environment.

**Lego** - Children enjoyed a relaxed free play session with LEGO. They had the freedom to build anything they imagined from vehicles and buildings to fantasy worlds and creative characters. The open-ended play encouraged collaboration, problem-solving, and imaginative expression, allowing each child to explore their own ideas at their own pace.

**Art** - In Art Club, children designed and coloured their own unique owls, exploring patterns, shapes, and vibrant colour combinations. This fun activity encouraged creativity and fine motor skills while allowing each child to express their individuality through imaginative owl designs.

**Robotics** - Children explored the exciting world of technology by engaging with programmable robots and coding activities. They worked on building simple robotic models and learned how to give them instructions, developing essential skills in problem-solving, sequencing, and logical thinking.
